Summary

Hi! I am a UI/UX & Product Designer, i enjoy creating things that live on internet, My interest in user experience and user interface design started back in 2015, and i decided to continue working as UI/UX Designer. With the time i started understanding the user experience a bit deeply.

Fast forward today, i have had the privilege of working with tech giant, and startups, my main focus these days is building accessible, inclusive and digital experience at Edkasa for a noble cause of spreading education.

In my design according to user mind approach, where I make a connection between user and product, I always make sure that the product is Usable, Enjoyable, Equitable and perfect in usability.

Thanks
